

Central and Eastern European Proteomic Conference

13th CEEPC

23-25.09.2019, Ustron, Poland

Dear friends and colleagues,

On behalf of the organizing committee, I'm delighted to welcome you to the 13th Central and Eastern European Proteomic Conference. The conference will be held in Ustron, Poland, on September 23-25, 2019.

The conference subjects will include but not will be limited to the following topics: clinical proteomics, exosome proteomes, molecular imaging by MSI, bioinformatics, multi-omics, new technologies applications. The program also includes dedicated time for late-breaking news and young researcher contributions through a "Young Guns" session.

The CEEPC series has quickly established itself as one of the major annual events in the field proteomics in our part of Europe, starting from the 1st CEEPC meeting in Prague (2007). After the success of 12th CEEPC in Bucharest (2018) the story will be continued.

We look forward to welcoming you to Ustron!

On behalf of the conference organizers:

Piotr Widlak
